Junkware removal tool from bleeping computer

Malwarebytes announced last week that they have interrupted development for the Junkware Removal Tool. For those who have never heard of the Junkware Removal Tool, or JRT, it is a popular adware and junkware cleanup utility that is commonly used in support forums and tech stores. Junkware Removal Tool JRT was developed in 2012 by one of BleepingComputer's malware removal helpers named Thisisu and was used extensively in the site's virus removal guides and in our support forums. As one of the first, if not the first, site to host the tool, it quickly became one of our most downloaded utilities with over 8 million downloads. In June 2015, Malwarebytes acquired JRT and hired its developer, Filipos Moulatis, to continue to support it and integrate it into existing Malwarebytes technologies. Then in October 2016, Malwarebytes purchased another well-known anti-ware tool called AdwCleaner. This tool is also hosted on BleepingComputer and has been downloaded over 50,000,000 times! Unfortunately, all good things come to an end and Malwarebytes has decided to retire JRT and roll out further development in AdwCleaner instead. From malwarebytes' page this makes sense as there is no need to continue development on two completely different tools that are designed to combat the same type of threat. JRT Discontinued Message While JRT will still be available, from October 26th, JRT it will no longer be maintained and new features will not be added. Malwarebytes, though, will continue to support JRT through April 26th 2018. During this time, Malwarebytes recommends that users of JRT transition to AdwCleaner, which will continue to be developed and supported. BleepingComputer will also continue to host the executable for those who want to continue using it. Ultimately, this announcement is a death knell for JRT and I expect to see more and more people stop using it and switch to an alternative like AdwCleaner. RIP Junkware Removal Tool and a big thank you to Filipos for making such an amazing tool! Malwarebytes kicks Windows printers offline Thisisu's Junkware Removal Tool cleans your system of PUPs (potentially unwanted programs) like adware and toolbars almost as easily as they find their way into your system. It's not uncommon for freeware to come bundled with other programs that you can usually decline to install, but it's also not unusual for one to sneak past your defenses. Junkware Removal Tool (JRT) is a one-step system cleaner that targets PUPs, adware, toolbars, and other malicious, suspicious, and malicious system parasites, removing not only the unwanted program, but also any traces left behind in your registry and other places where dirt accumulates. JRT is portable freeware, so it leaves no trace behind, either. It is also very basic, from the user's point of view. There are no settings or settings, and Line-style interface may not appeal to some users. But it is fast and efficient and it produces a detailed log of its actions. Actions: extracted JRT's executable file and clicked on it. The program was opened in a command-line interface. Following JRT's instructions, we closed our browser and other open programs and pressed a random key to continue. JRT set up a registry backup and began scanning our system, checking Startup, Modules, and so on, in order. It is normal for different windows to open and close quickly when JRT is running. The entire scan took about five minutes and found, removed, and scrubbed up a few PUPs. JRT automatically saved a text log to our desktop. It detailed everything the program did. Of course, if there is a toolbar or PUPs that you actually want to keep, you need to reinstall it every time you run JRT as it provides no exclusion list. Junkware Removal Tool's super-basic interface and all-or-nothing process limit its appeal somewhat, though we have no complaints about JRT's effectiveness. But similar tools that offer more options are available. We drove some popular cleaners after running JRT. Far from being redundant, JRT added powerful, targeted cleaning to our safety lineup. JRT is free and safe, so you have nothing to lose by trying it, except of course for those annoying PUPs! I recommend that you use another computer to download this tool because sometimes infected machines prohibit the download of Malware removal tools. Save it to a USB Memory Stick and transfer it to the infected machines. Start your web browser and Google for the Junkware Removal Tool and only download it from www.bleepingcomputer.com website as shown on the screenshot below. This is the first link in search results. Now you should see something similar in the Screen-shot below. Click the blue box Download now @BleepingComputer Click Save File When the download is complete start you Explorer by clicking the icon shown below. Go to the Downloads folder and double-click the JRT tool as shown below. For security reasons, Windows asks you if you like to run the downloaded software. Click Run JRT starts up in a Command-line interface and is looking for updates after looking for an update it displays disclaimer with you can accept by pressing a key now it is starting to check for Malware in categories that appear on the screen. as soon as the scan is done it will remove all Malware found during the scan the scan report will be generated and displayed for you to review. A few minutes ago, Adobe released its monthly Patch Tuesday update train for the month of August 2018. This month, Adobe's security team has patched vulnerabilities in products like Flash Player, Enterprise CMS, Acrobat and Reader (PDF Readers/Editors), and the Creative Cloud Desktop app. Catalin Cimpanu August 14, 2018 10:20 Hackers can fake patients' By mimicking data sent from medical device clients to key surveillance systems, a McAfee security researcher revealed over the weekend at the DEF CON 26 security conference. security conference. Cimpanu August 14, 2018 06:46 As Bleeping Computer first reported back in January this year, Google has started rolling out support for built-in lazy loading inside Chrome. Catalin Cimpanu August 14, 2018 03:55 A new job posting on LinkedIn has given us a closer look at Windows Core development plans. The job engineer for a Software Engineering Manager was posted almost 11 days ago, and it's all about Windows Core OS. Mayank Parmar August 13, 2018 07:43 PM Over the past week, scammers are now exploiting a new extortion email campaign that claims the recipient's phone was hacked, includes a partial phone number of the recipient, and further that they created videos using the recipient's webcam. It then requires \$1K USD in Bitcoins or the hacker will release video & other info. Lawrence Abrams August 13, 2018 07:02 Microsoft has just started rolling out the new search experience in the Windows 10 App Store on Insider Builds, and it comes with a new search category called Memberships. The new category centralizes all available memberships and allows users to quickly find and cancel them. Mayank Parmar August 13, 2018 06:46 Cisco, one of the world's largest provider of network equipment, released security updates today to patch a vulnerability in IOS and IOS XE operating systems that run the vast majority of its devices. Catalin Cimpanu August 13, 2018 05:34 A new update to Firefox for iOS has been released that now offers a dark theme for those who do not want to disturb others who are sleeping or feel that it is easier for their eyes. Also included in this update is the ability to search and rearrange your open tabs. Lawrence Abrams August 13, 2018 03:33 Google, Microsoft, Technology Today, a report has revealed that Google wants to bring Microsoft's Windows 10 support to Chromebooks. Reports indicate that the company is working on a new project called Campfire that would allow Chromebook owners to dual boot Windows 10 and Chrome OS. Mayank Parmar August 13, 2018 02:53 PM Dropbox has announced that starting on November 7, 2018, only ext4 file system will be supported in Linux for synchronizing folders in dropbox desktop app. Linux users who have synced with other file systems such as XFS, ext2, ext3, ZFS, and many others will no longer have functioning Dropbox synchronization after that date. Lawrence Abrams August 13, 2018 01:02 PM Two newly discovered vulnerabilities in the fax protocol can transform fax machines into entry points for hackers in corporate networks, two Check Point researchers revealed last week in a speech given at the DEF CON 26 security conference held in Las Vegas. Catalin Cimpanu August 13, 2018 12:19 PM Some of the most popular Android applications installed on your phone may be vulnerable to a new type of attack named Man-in-the-Disk that may allow a third-party app to crash them and/or run malicious code. Catalin Cimpanu August 13, 2018 On DEF CON 26 26 conference held in Las Vegas last week, a security researcher detailed a backdoor mechanism in x86-based VIA C3 processors, a CPU family produced and sold between 2001 and 2003 by Taiwan-based VIA Technologies Inc. Catalin Cimpanu August 13, 2018 04:48 Last week, at the DEF CON security conference held in Las Vegas, security researchers presented details of 47 vulnerabilities in firmware and standard apps of 25 Android smartphone models, 11 of which are also sold in the United States. Catalin Cimpanu August 12, 2018 06:11 PM Thursday a new variant of Dharma Ransomware was discovered that adds .cmb extension to encrypted files. This article will discuss how to get infected with Cmb ransomware and how it encrypts a computer. Lawrence Abrams August 11, 2018 03:10 Pm Attackers are targeting DLink DSL modem routers in Brazil and exploiting them to change the DNS settings to a DNS server under the attacker's control. This allows them to redirect users who are trying to connect to their online banks to fake banking websites that steal the user's account information. Lawrence Abrams August 11, 2018 01:27 This was a pretty quiet week with mostly small variations, a new active release, and a large organization being hit. This article outlines what new ransomware has been released and other ransomware related stories. Lawrence Abrams August 11, 2018 10:58 Microsoft has released another Windows 10 19H1 build, as the company has started working on the next big feature update for its operating system. It comes with the same changes as the latest build for Windows 10 Redstone 5 (also known as Windows 10 October 2018 Update). Mayank Parmar August 10, 2018 06:30 A new distribution campaign is underway for a STOP Ransomware variant called KeyPass based on the amount of victims that have been seen. Unfortunately, how ransomware is being distributed is unknown at this time. Lawrence Abrams August 10, 2018 06:14 HAVE you ever heard to say If it's too good to be true, then it probably is. If so, then it applies perfectly to programs that claim that they can help you cheat in Fortnite or earn free V-Bucks. In this article we take a look at 5 malware samples that pretend to be Fortnite cheats, hacks, or tools. Lawrence Abrams August 10, 2018 4:39Pm See more
